

Definition of Done

User story

- The high level behaviour should match what defined by the user story
- Acceptance criteria should be defined in the format GIVEN .. WHEN .. THEN ..
- The system should handle possible common edge cases with helpful error messages
- The completed user story implements a self contained feature
- Major refactoring changes should be justified and documented
- All tasks for the user story must be completed

Task

- All test cases must pass
- All the code must adhere to the specified coding style
- All the code should have a reasonable amount of documentation
- All dependent tasks may begin after completion of the “prerequisite”
- Obscure pieces of code should be documented properly (or avoided)
- Other team members should be aware of the changes made
- New tasks should not break existing features
- The task must be merged and pushed to the Github repo after completion
- Excessive commented code should be removed
- Django should not raise warnings
